

The **iStreamer** is a high performance audio interface that allows an Apple iPad™, iPhone® or iPod® and a home entertainment system to become perfect partners. With an iStreamer connected, you can enjoy true CD quality sound with the convenience of having all your music on one device.

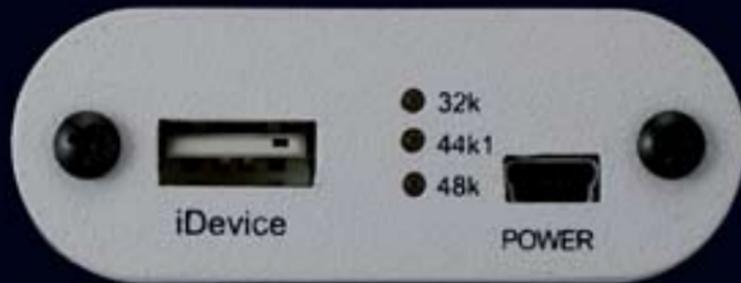

Simply plug your iPad, iPhone or iPod into the iStreamer; plug the iStreamer into its included power supply and your home entertainment system. From the iPod 'App' on iPad or iPhone or directly on iPod simply push 'play' and enjoy unmatched sound quality and convenience. With its ultra high performance circuitry and host mode of operation (eliminating interface jitter), the iStreamer renders the CD player and CD library obsolete. For the first time, you can enjoy a level of sound quality never before possible from a portable audio device.

The iStreamer provides full support for applications designed to run on an iPad, iPhone or iPod. The iStreamer allows you to connect to a home entertainment, television or stereo system to listen in high quality to Internet radio, streaming music and movies from providers such as Rhapsody™, Napster™, Pandora™, Netflix™ and other on-line services.

High Resolution Technologies iStreamer, designed and manufactured in Southern California.
