LIKE FINE AGED WINE...

...fortunately McIntosh is here to remind us how high-end is like, Well...you know, like the one we have always known since our childhood!

Our youth forever gone!

The McIntosh components conducted themselves impeccably in our magazine's audition room, since they managed to link up with some of the most neutral and demanding accompanying components in a unique way. I have never listened to such a joyful and enjoying sound at the magazine studio. I believe that a great part of this immense success lies in the McIntosh power stages. Just add to this their flawless ergonomics behavior as well as the sense of confidence in their use and it is pretty easy to understand my enthusiasm.

In a few words, these are components that I would easily place at the top of my dream pre-amp/ power-amp combination shopping list, since I managed with their help to get away for awhile from high-end anxiety and experience and listen to music just like when I was young person. I bow my head before them.
